## 1.3 Emergency Measures

### 1.3.1 Battery Electrolyte Leakage

In case of electrolyte leakage from the battery module, it is crucial to avoid any contact with the leaked liquid or gas due to its corrosive nature. The electrolyte can cause skin irritation or chemical burns to individuals. If anyone accidentally comes into contact with the leaked substance, the following steps should be taken:

**i: Inhalation of the leaked substance:**

Immediately evacuate from the contaminated area. Seek immediate medical assistance.

**ii: Eye contact with the leaked substance:**

Rinse the affected eyes with clean water for at least 15 minutes. Seek immediate medical assistance.

**iii: Skin contact with the leaked substance:**

Thoroughly wash the affected area with soap and clean water. Seek immediate medical assistance.

**iv: Ingestion of the leaked substance:**

Induce vomiting, if possible. Seek immediate medical assistance.

It is crucial to prioritize safety and take prompt action by seeking appropriate medical attention in case of any contact with the leaked electrolyte.

### 1.3.2 Fire

When the ambient temperature exceeds 150°C, there is a risk of the battery exploding. In the event of a fire involving the battery, it is important to be aware that poisonous and hazardous gases may be released.

To effectively respond to a battery fire, please follow these guidelines:

- Ensure the availability of a carbon dioxide (CO<sub>2</sub>) extinguisher, Novac1230, or FM-200 nearby. These types of fire extinguishers are suitable for tackling electrical fires, including battery fires.
- Avoid using water or ABC dry powder extinguishers to extinguish the fire. Water can spread the fire and dry powder may not be effective in suppressing a battery fire.
- If a fire occurs, contact the local fire department immediately. Firefighters should be equipped with full protective clothing and self-contained breathing apparatus to safely handle the situation.

It is crucial to prioritize safety and take appropriate measures to handle battery fires, including the use of suitable fire extinguishers and protective equipment for firefighting personnel.

Inspect the battery module for any dust accumulation. Clean the dust if present to prevent it from affecting heat dissipation.	Once every 6 months
Check for the presence of any liquid or pests near the battery. Take measures to prevent long-term intrusion.	Once every 6 months
